Road Map

1) First of all, portfolios should work equally well in all browsers. To do this, I need to check for bugs.
2) I need to figure out how to load images and videos from databases using AJAX.
3) The gallery will look like a slider with scroll buttons.
4) I need to add a popup to display the photo.
5) It is necessary to edit the menu: add a background, change the location upon opening, change the icon.
6) I need to correct the background and mediaqueris, configure the site to work on all devices.
7) It is necessary to add a shaman and a tree to the site and start css animation.
8) It is necessary to correct the contact form.
